## UW150RT Laser Welding Workstation with Rotary Dial Plate

Dimensions: W 32" x D 60" x H 81"

A CDRH Class 1 enclosure fully contains the processing area. The rotary dial table is baffled to prevent stray or scattered laser radiation from escaping the work envelop; interlocks on the side access door disable the laser radiation. The work area at the front of the station is protected against pinch during rotation of the Dial Plate by a 3-sided light barrier system. A 6"x12" observation window located on the side door, made from a laser safe material, allows eye-safe viewing of the process.

The part tooling is fixed into position on the dial rotary plate. The motorized, dial plate rotates counter-clockwise 180° at each cycle.
